How to search

Run Perl (command line), navigate to the folder with ps scan contents, your FASTA file, and your motif dat file.

Execute the motif search command:

ps scan.pl -d motifs.dat my sequences.fa -o fasta >result.fa

ps scan.pl is the script, motifs.dat contain your motifs, my sequences.fa is the FASTA file of all your sequences, result.fa will be the result file in FASTA created by the program after it finishes executing
